Faridabad, Haryana, India | B.Tech CSE (AI & ML), 2027

SUMMARY

B.Tech CSE (AI & ML) student with strong foundations in machine learning and data-driven problem solving. Experienced in building predictive models, recommendation systems, and deploying scalable applications. Currently developing skills in numerical methods, differential equations, and deep learning for scientific computing.

TECHNICAL SKILLS

- **Programming:** Python, SQL
- **Machine Learning:** XGBoost, Recommendation Systems, Model Evaluation, Feature Engineering
- **Deep Learning:** PyTorch (Basics)
- **Mathematics:** Linear Algebra, Probability, Differential Equations (Basics)
- **Scientific Computing:** NumPy, Pandas
- **Data & Analytics:** Power BI, A/B Testing, Hypothesis Testing
- **Tools:** Streamlit, API Integration

EXPERIENCE

Software Trainee | *Espire Infolabs, Faridabad* Jun 2025 – Aug 2025

- Resolved 10+ bugs in Python applications, reducing system errors and improving stability.
- Collaborated with 4 developers to optimize execution time, achieving approximately 15% faster performance.
- Assisted in AI integration within Power BI, contributing to the development of predictive dashboards to enhance business data visualization.

Intern Teacher | *Khushi Ek Ehsaas, Faridabad* Jul 2025

- Taught computer fundamentals to 30-35 students, conducting classes 5 days per week for 1 month.
- Increased student participation by approximately 25% through structured and interactive teaching methods.
- Introduced fundamental Artificial Intelligence concepts by teaching the Travelling Salesman Problem and leading problem-solving sessions using the Cannibals and Missionaries game.

Small Business Owner (Reselling) | *Self-Employed, Faridabad* Dec 2025 – Jan 2026

- Achieved approximately 20% profit margins by optimizing pricing and inventory strategies.
- Completed 30+ sales transactions while maintaining consistent customer engagement.

PROJECTS

Chronic Kidney Disease Risk Analysis using XGBoost

- Built a machine learning model achieving 92% accuracy using Python and XGBoost.
- Improved ROC-AUC score through feature engineering and model tuning.
- Compared Logistic Regression and XGBoost to select the best-performing model.
- Deployed the application using Streamlit for real-time predictions.

AI Chatbot for Document Analysis

- Processed and summarized over 50 documents using an OpenLLM and Python-based chatbot with API integration.
- Implemented a wrapper algorithm in LLaMA to optimize system extraction and logic flows.
- Extracted key insights from PDF files, reducing manual analysis effort.
- Developed an interactive user interface using Streamlit.

Movie Recommendation System

- Built collaborative and content-based filtering models for personalized recommendations.
- Engineered recommendation architecture utilizing Matrix Factorization and Cosine Similarity techniques.
- Improved recommendation accuracy through feature engineering and evaluation metrics.
- Used SQL for efficient data querying and structured data handling.

Numerical Methods for Differential Equations

- Solved ordinary differential equations using Euler and Runge-Kutta methods in Python.
- Compared numerical accuracy and visualized results using plots.
- Optimized computations using NumPy for faster processing.

CERTIFICATIONS

- **Introduction to Machine Learning** – IIT Kharagpur (Certifying Authority: NPTEL)
- **Python Programming** – (Certifying Authority: MyCaptain)

EDUCATION

B.Tech CSE (AI & ML) | *SRM Institute of Science and Technology*
High School | *Delhi Public School, Faridabad*

2023 – 2027
2021 – 2023
